

HELM : Application Package Manager for K8s

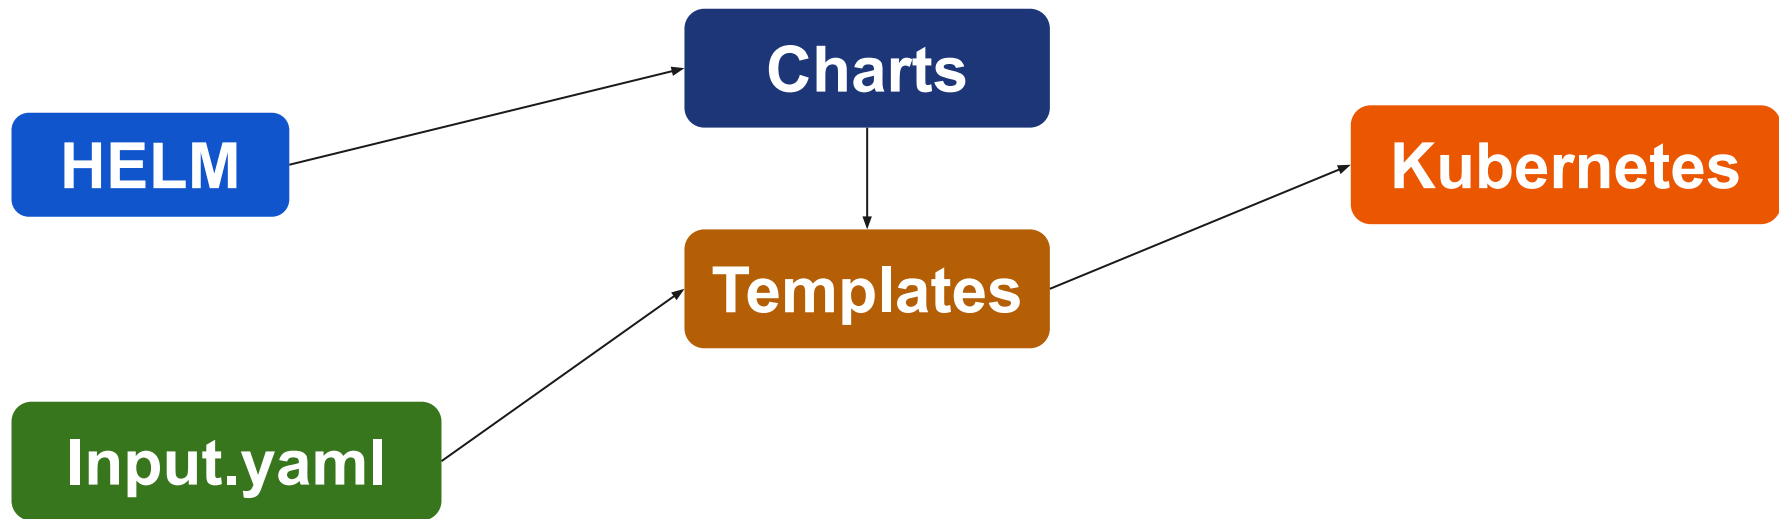

HELM : After HELM

HELM : K8s Packaging Manager

- With HELM-
 - Instead of writing separate YAML files for each application manually, user can simply create a Helm chart and let Helm deploy the application to the cluster for you.
 - Helm chart can be customized when deploying it on different Kubernetes clusters.

HELM : K8s Packaging Manager

HELM : K8s Packaging Manager

➤ Benefits of HELM-

- Greatly improved productivity using Single Click Deployment.
- Reduced complexity of deployments
- More reproducible deployments and results
- Ability to leverage Kubernetes with a single CLI command
- Easier rolling back to previous versions of an app

Thank You...

Don't be the Same! Be Better!!!
